The xr-hyper package*

David Carlisle

2026-11-03

This package was an extension of the xr package. It was developed to support the extended label syntax of the hyperref package and to enable active links to the external documents.

In the LaTeX release 2023-06-01 the label syntax of hyperref and the LaTeX kernel were synchronized, and there is no longer a need for two packages.

xr-hyper is therefore now deprecated. It simply loads the xr package.

1 Usage

See the documentation of the xr package.

```
1 ⟨*package⟩
2 \RequirePackage{xr}
3 ⟨/package⟩
```
